

HitMarker

Small but Mighty

MacDonald

INNOVATIONS

Creative Technology For Competitive Shooters

The battery is located in the lower half of the housing and should be protected behind the steel target.

Do not shoot through the battery or it may catch fire. Do not use with any target that could be penetrated.

The HitMarker enclosure is completely sealed and waterproof. Do not attempt to open HitMarker. The battery is not replaceable or rechargeable.

After each cycle, battery life is indicated:

- 3 blinks: full
- 2 blinks: medium
- 1 blink: low (reduced brightness)

Estimated battery life is 40,000 to 60,000 cycles, approximately 5-10 years.

Install HitMarker on the backside of the steel target with the LED visible using strong hook & loop material (e.g. industrial strength Velcro). You can install HitMarker in any orientation (up, down, left, right).

For large caliber rifles at close ranges, heavier steel (min. ½" thick) may be required to prevent HitMarker from falling off the target. Multiple HitMarkers may be used on the same target.

HitMarker is warranted to function as intended for 2 years with normal wear and tear. Warranty does not cover damage due to shooting, dropping or cosmetic damage.
